EDUCATION

National University of Singapore

Bachelor of Computing, Computer Science

Cumulative GPA: 4.5

Relevant Coursework: Software Engineering; Data Structures and Algorithms; Programming Methodology

Aug. 2024 – May 2028

Singapore

EXPERIENCE

Citi

Software Engineer Intern

Jun. 2026 – Aug. 2026

Singapore

Fly Fairly

Software Engineer Intern

Jan. 2026 – Apr. 2026

Singapore

- Identified and eliminated **3 key operational bottlenecks** through structured stakeholder interviews.
- Built back-office reporting dashboard with **Next.js**, reducing cross-team coordination overhead and improving sprint throughput by an estimated **20%**.
- Proposed and documented modernized tech stack solutions for interviewed problems which are adopted into the technical roadmap for **3 out of 6** company's departments for future implementation.

Toppan Ecquaria

Software Engineer Intern

May 2025 – Jul. 2025

Singapore

- Designed and integrated **RAG pipelines** and **LLM-based AI agents** into enterprise SaaS products, enabling context-aware document Q&A; deployed across **10+ client companies**, directly contributing to new product adoption and upsell opportunities.
- Enhanced an AI lip dubbing system by leveraging open-source audio models such as Kokoro and the LatentSync lip-sync model, enabling multilingual AI video dubbing solutions sold at **\$5,000 per license**.
- Refactored and modernized multiple web applications using **React** and **FastAPI**, improving UI performance, scalability, and production-readiness for deployment across the Toppan Next Group's **2,000 users**.

PROJECTS

GroceryPicker | Independent Software Development Project (Orbital – Apollo 11 Level)

May 2025 – Jul. 2025

- Built an Android application with **React Native + Express.js** that returns the best prices for each grocery out of every major supermarket, allowing users to minimize spending with ease.
- Implemented rigorous and scheduled web scraping of supermarket groceries with **Playwright** hosted on **GCP** to obtain a database of **50k groceries**, which is stored in PostgreSQL (Supabase).
- Developed an accurate **RAG** enhancement to **LLM** to allow sieving of cheapest groceries and semantic search.

Aimlabs & Parkour

May 2024 – Jul. 2024

- Engineered a custom **3D game engine** in **C++** and **OpenGL** from scratch, implementing a scene graph, frustum culling, and a custom memory allocator to achieve stable **60+ FPS** rendering on mid-range hardware.

EXTRACURRICULAR ACTIVITIES

Google Developer Student Club @ NUS

Software Engineer

Aug. 2025 – Present

Singapore

- Working with Caring For Life to build a full stack application with Next.js + FastAPI to streamline their onboarding, volunteer management and workflows.
- Developed frontend pages with React and integrated API calls using TanStack.

NUS Fintech Society

Software Engineer

Aug. 2025 – Present

Singapore

- Building AI-powered itinerary planner with HeyMax.
- Developed transcribers for popular social media platforms, converting social media posts into context for generation of itinerary plans.

SKILLS

Languages : Python, JavaScript, Java

Frameworks : React, React Native, FastAPI, Next.js, Express.js

Databases : PostgreSQL
